## Question Paper Code: 80277

B.E./B.Tech. DEGREE EXAMINATIONS, APRIL/MAY 2019.

First Semester

Civil Engineering

## PH 8151 — ENGINEERING PHYSICS

(Common to all Branches)

(Regulation 2017)

Time: Three hours

Maximum: 100 marks

Answer ALL questions.

PART A - (10 × 2 = 20 marks)

- 1. List any two factors affecting elastic modulus and tensile strength.
- 2. An artificial denture with ultimate strength of 10<sup>7</sup> Nm<sup>-2</sup> breaks when the jaws exerted a normal force of just 2N while eating. Estimate the area in which the force acted on the denture.
- 3. Show that it is possible for stimulated emission to be predominant over spontaneous emission at microwave frequencies (~GHz) at room temperature 300K.

Given that  $h = 6.626 \times 10^{-34} \text{ Js } k = 1.38 \times 10^{-23} \text{ J/K}$ 

- 4. List the two major differences of homojunction and heterojunction lasers.
- 5. What are bimetallic strips? Give its application.
- 6. Give any two examples in daily life demonstrating thermal insulation is done through compound media.
- 7. Give the two important characteristics of black body radiation.
- 8. Define Compton effect.
- 9. Determine the lattice constant of a FCC crystal having atomic radius of 14.76 nm.
- 10. How does plastic deformation occur in solids?

## PART B - (5 × 16 = 80 marks)

| 11. | (a) | (i) Derive an expression for couple per unit twist for a cylinder. (10)                                                                                                                                                |  |  |  |  |  |
|-----|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|
|     |     | (ii) Show that it is higher for a hollow cylinder than a solid cylinder made of the same material, mass and length. (6)                                                                                                |  |  |  |  |  |
|     |     | Or                                                                                                                                                                                                                     |  |  |  |  |  |
|     | (b) | Derive an expression for rigidity modulus and explain how rigidity modulus of a wire can be determined using a torsion pendulum. (16)                                                                                  |  |  |  |  |  |
| 12. | (a) | (i) Derive Einstein's relations for spontaneous and stimulated emission of radiation. (12)                                                                                                                             |  |  |  |  |  |
|     |     | (ii) Obtain the ratio of Stimulated emission rate to stimulated absorption rate and discuss population inversion. (4)                                                                                                  |  |  |  |  |  |
|     |     | Or                                                                                                                                                                                                                     |  |  |  |  |  |
| À   | (b) | Derive Numerical Aperture and Acceptance Angle of a fiber. Discuss the various types of optical fiber. (8 + 8)                                                                                                         |  |  |  |  |  |
| 13. | (a) | Explain Forbe's method to determine the thermal conductivity of a good conductor. (16)                                                                                                                                 |  |  |  |  |  |
|     |     | Or                                                                                                                                                                                                                     |  |  |  |  |  |
|     | (b) | Explain Lee's Disc method to determine the thermal conductivity of a poor conductor. (16)                                                                                                                              |  |  |  |  |  |
| 14. | (a) | Derive an equation for Plank's quantum theory of radiation. (16)                                                                                                                                                       |  |  |  |  |  |
|     |     | Or                                                                                                                                                                                                                     |  |  |  |  |  |
|     | (b) | Solve time independent Schrödinger wave equation for a particle trapped in a potential well and obtain eigen functions and energy eigen values for the particle. Also show that the energy values are quantized.  (16) |  |  |  |  |  |
| 15. | (a) | Describe the two bulk crystal growth methods in detail using suitable schematic diagrams to fabricate semiconductor and dielectric materials.  (16)                                                                    |  |  |  |  |  |
|     |     | Or                                                                                                                                                                                                                     |  |  |  |  |  |
|     | (b) | (i) Derive the packing factor for HCP crystal structure. (10)                                                                                                                                                          |  |  |  |  |  |
|     |     | (ii) Write short notes on crystal imperfections and its advantages. (6)                                                                                                                                                |  |  |  |  |  |
|     |     |                                                                                                                                                                                                                        |  |  |  |  |  |
