DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

QUESTION BANK

EC 8451 - ELECTROMAGNETIC FIELDS

IV SEMESTER

Prepared by

Mrs. J. Arul Martinal, AP/EEE

DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING

QUESTION BANK

SUBJECT : EC 8451 - ELECTROMAGNETIC FIELDS

SEM / YEAR: IV/II

UNIT I INTRODUCTION

Electromagnetic model, Units and constants, Review of vector algebra, Rectangular, cylindrical and spherical coordinate systems, Line, surface and volume integrals, Gradient of a scalar field, Divergence of a vector field, Divergence theorem, Curl of a vector field, Stoke's theorem, Null identities, Helmholtz's theorem

$\mathbf{PART} - \mathbf{A}$				
Q.No	Questions	BT Level	Competence	
1.	List the source quantities in the electromagnetic model.	BTL 1	Remembering	
2.	State divergence theorem.	BTL 1	Remembering	
3.	Define Stokes theorem.	BTL 1	Remembering	
4.	Name the universal constants in the electromagnetic model.	BTL 1	Remembering	
5.	What are surface and volume integrals?	BTL 1	Remembering	
6.	Relate the transformation between spherical and Cartesian coordinates.	BTL 1	Remembering	
7.	Summarize line, surface and volume charge density.	BTL 2	Understanding	
8.	Express the relationship between potential and electric field intensity.	BTL 2	Understanding	
9.	Outline the relationship between magnetic flux density and field density.	BTL 2	Understanding	
10.	Point out the role of vector algebra in electromagnetics.	BTL 2	Understanding	
11.	Identify the unit vector and its magnitude corresponding to the given vector $A=5 a_x + a_y + 3 a_z$.	BTL 3	Applying	
12.	Specify the unit vector extending from the origin towards the point $G(2, -2, -1)$.	BTL 3	Applying	
13.	Justify that electric field is conservative.	BTL 3	Applying	
14.	Analyze a differential volume element in spherical coordinates (r, θ , ϕ) resulting from differential charges in the orthogonal coordinate systems.	BTL 4	Analyzing	

15.	Compare orthogonal and non-orthogonal coordinate systems.	BTL 4	Analyzing
16.	Convert the point $\mathbf{P}(5, 1, 3)$ from Cartesian to spherical coordinates.	BTL 4	Analyzing
17.	Interpret the physical significance of curl of a vector field.	BTL 5	Evaluating
18.	Calculate the values of universal constants of free space.	BTL 5	Evaluating
19.	Estimate the distance between the given vectors A (1, 2, 3) and B (2, 1, 2).	BTL 6	Creating
20.	Obtain the value of α if magnetic field B is a solenoid where $\mathbf{B}=25\mathbf{x}\mathbf{a}\mathbf{x}+12\mathbf{y}\mathbf{a}\mathbf{y}+\alpha \mathbf{z}\mathbf{a}\mathbf{z}.$	BTL 6	Creating
	PART – B		
1.	What is electromagnetics? Give detailed explanation on Electromagnetic model with corresponding units and constants. (13)	BTL 1	Remembering
2.	 (i) Verify whether the vector field E= yz ax + xz ay + xy az is both solenoidal and irrotational. (7) (ii) Given A =5ax and B= 4 ax + t ay. Find t such that angle between A and B is 45 degree. (6) 	BTL 1	Remembering
3.	(i)Write short notes on scalar and vector field.(4)(ii) What is unit vector? Discuss on the mathematical operations with vectors(9)	BTL 1	Remembering
4.	Explain how a spherical coordinate system describes the position of the point in free space and its differential elements. (13)	BTL 1	Remembering
5.	(i) Summarize about the Dot product and cross product of vectors. State its properties and applications. (7) (ii) The three fields are given by $A = 2ax - az$, $B = 2ax - ay+2az$ and C = 2ax - 3ay + az. Find the scalar and vector triple product. (6)	BTL 2	Understanding
6.	Obtain the expressions for differential area and volume element in cylindrical coordinate system.(13)	BTL 2	Understanding
7.	State and prove divergence theorem for a given differential volume element.(13)	BTL 2	Understanding
8.	Estimate the spherical coordinates of A and Cartesian coordinates of B for the two given points A (x = 2, y = 1, z = 3) and B (ρ = 1, ϕ = 450, z = 2) (13)	BTL 3	Applying
9.	Given the two points A (x = 2, y = 3, z = -1) and B (r=4, θ =25 ⁰ , φ =120 ⁰). Solve the spherical coordinates of A and Cartesian coordinates of B . (13)	BTL 3	Applying
10.	Analyze the geometrical position of the point in Cartesian coordinate system and obtain distance vector and differential elements. (13)	BTL 4	Analyzing
11.	Verify divergence theorem for the vector $\mathbf{A} = 4x \mathbf{a}_x - 2y^2 \mathbf{a}_y + z^2 \mathbf{a}_z$ taken over the cube bounded between x=0, x=1, y=0, y=1 and z=0, z=1. (13)	BTL 4	Analyzing

12.	 (i) Explain in detail line, surface, and volume integral of vector function. (7) (ii) Express the rate of change of a scalar in a given direction in terms of its 	BTL 4	Analyzing			
	gradient and its properties. (6)					
13.	(i) Examine the null identities using general orthogonal coordinates. (7)	BTL 5	Evaluating			
	(ii) Summarize the use of Helmholtz's theorem in electromagnetic engineering. (6)					
14.	(i) Find the expression for the curl of a vector and write its significance. (7)	BTL 6	Creating			
	 (ii) State and formulate Stokes theorem to relate line integral and surface integral (6) 					
	PART – C	I I				
1.	Evaluate divergence theorem for the given $\mathbf{D}=2\mathbf{r} \mathbf{z}^2 \mathbf{a_r} + \mathbf{r} \cos^2 \varphi \mathbf{a_z}$, where $\mathbf{r}=3$ and $\mathbf{z}=5$. (15)	BTL 5	Evaluating			
2.	Express vector B in Cartesian and cylindrical systems. Given $\mathbf{B} = 10/r \mathbf{a_r} + r \cos\theta \mathbf{a_{\theta}} + \mathbf{a_{\phi}}$, Then find B at (-3,4,0) and (5, $\pi/2$, -2) (15)	BTL 5	Evaluating			
3.	Verify the stokes theorem for a vector field $\mathbf{A} = 2r \cos \varphi \mathbf{a_r} + r^2 \mathbf{a_{\varphi}}$ in	BTL 6	Creating			
	cylindrical coordinates for the contour shown in figure below, (15)					
	$a \qquad b \qquad x$					
4.	Estimate $\iint \mathbf{F} \cdot \mathbf{n}$ ds using divergence theorem where $\mathbf{F} = 2 \ge \mathbf{x} \ge \mathbf{a}_{\mathbf{x}} + \mathbf{y}^2 = \mathbf{a}_{\mathbf{y}} + 4$ yz $\mathbf{a}_{\mathbf{z}}$, surface of the cube bounded by $\mathbf{x}=0,\mathbf{x}=1, \mathbf{y}=0, \mathbf{y}=1$ and $\mathbf{z}=0, \mathbf{z}=1$.	BTL 6	Creating			
	(15)					
	UNIT II ELECTROSTATISTICS					
Electric field, Coulomb's law, Gauss's law and applications, Electric potential, Conductors in static electric field, Dielectrics in static electric field, Electric flux density and dielectric constant, Boundary conditions, Capacitance, Parallel, cylindrical and spherical capacitors, Electrostatic energy, Poisson's and Laplace's equations, Uniqueness of electrostatic solutions, Current density and Ohm's law, Electromotive force and Kirchhoff's voltage law, Equation of continuity and Kirchhoff's current law.						
	PART – A					
Q.No	Questions	BT Leve	Competence			
1.	Define electric field intensity.	BTL 1	Remembering			
2.	Write the statement of Coulomb's law.	BTL 1	Remembering			
3.	What is the difference between potential and potential difference?	BTL 1	Remembering			
4.	Mention the two sources of electromagnetic fields.	BTL 1	Remembering			
5.	How would you relate the electric field intensity and electric flux density?	BTL 1	Remembering			

6.	List the properties of conductor and dielectric materials.	BTL 1	Remembering
7.	Give examples for uniform and non-uniform electric fields.	BTL 2	Understanding
8.	Summarize the principle of Superposition as applied to an electric potential of a point.	BTL 2	Understanding
9.	State Gauss law.	BTL 2	Understanding
10.	Describe about capacitance and capacitors.	BTL 2	Understanding
11.	Calculate the values of D at a distance $r = 5m$ for the uniformly charged sphere of radius 2m with charge density of 20 nC/m ³ .	BTL 3	Applying
12.	Solve the energy stored in a 10 μ F capacitor which has been charged to a voltage of 400V.	BTL 3	Applying
13.	How do you find the equivalent capacitance of two capacitors C_1 and C_2 connected in series?	BTL 3	Applying
14.	Obtain the relation between current and current density.	BTL 4	Analyzing
15.	Identify equation of Ohm's law in point form.	BTL 4	Analyzing
16.	Compare Poisson's and Laplace's equation.	BTL 4	Analyzing
17.	Evaluate the unique solution of electrostatic fields.	BTL 5	Evaluating
18.	Calculate the value of capacitance between two square plates having cross sectional area of 1 sq.cm separated by 1 cm placed in a liquid whose dielectric constant is 6 and the relative permittivity of free space is 8.854 pF/m.	BTL 5	Evaluating
19.	Formulate the current density of copper wire having conductivity of 5.8 $*10^7$ S/m and magnitude of electric field intensity E is 20V/m.	BTL 6	Creating
20.	Generalize the continuity equation in integral and differential form.	BTL 6	Creating
	PART – B		
1.	Q_1 and Q_2 are the point charges located at (0,-4, 3) and (0, 1, 1).If Q1 is 2 nC, Find Q2 such that the force on test charge at (0,-3,4) has no z component. (13)	BTL 1	Remembering
2.	(i)State and explain coulomb's law and deduce the vector form of force equation between the two-point charges.(7)(ii) Write notes on principle of Superposition as applied to charge distribution.(6)	BTL 1	Remembering
3.	(i) State and prove Gauss law.(7)(ii) Obtain the point form of gauss law.(6)	BTL 1	Remembering
4.	 (i) Write the equation of continuity in integral and differential form. (7) (ii) Discuss the point form of ohm's law and obtain the expression for resistance of a conductor. (6) 	BTL 1	Remembering
5.	Mention the importance of Poisson's and Laplace's equation in electromagnetics with necessary equations. (13)	BTL 2	Understanding
6.	Explain any two applications of Gauss law with neat diagrams. (13)	BTL 2	Understanding
7.	Obtain the expression for potential due to an electric dipole at any point P. Also find the electric field intensity and in terms of dipole moment. (13)	BTL 2	Understanding

8. With necessary diagrams develop the boundary conditions of the normal and tangential components of electric field at the interface of two media with different dielectrics. (13)	BTL 3	Applying
9. Deduce the expression for electrostatic energy required to assemble a group of charges at rest. (13)	BTL 3	Applying
 (i) Categorize the nature of dielectric material and polarization. (7) (ii) Determine the value of polarization and electric field intensity of homogeneous slab of lossless dielectric with electric susceptibility of 0.12 and electric flux density of 1.6nC/m². (6) 	BTL 4	Analyzing
11. A cylindrical capacitor consists of an inner conductor of radius 'a' & an outer conductor whose inner radius is 'b'. The space between the conductors is filled with a dielectric permittivity \mathcal{E}_r & length of the capacitor is L. Estimate the value of the Capacitance. (13)	BTL 4	Analyzing
12. Obtain the formula for the electric field intensity of an infinite long straight line carrying uniform line charge density of ρ_{L} (13)	BTL 4	Analyzing
13. Formulate the expression for a parallel plate capacitor. Also derive the equation for composite parallel plate capacitor with dielectric boundary parallel and normal to the plates. (13)	BTL 5	Evaluating
14. Elaborate the boundary conditions between conductor and dielectrics from the boundary conditions between conductor and free space. (13)	BTL 6	Creating
PART – C		-
1. Determine the expression for the electric field due to a charge circular ring of radius r placed in xy plane with center at origin having charge density of ρ_L C/m. Find E at the point (0, 0, 5) m from the circular ring of charge with radius 5 m lying in z = 0 plane with center at origin and having $\rho_L = 10$ nC/m. (15)	BTL 5	Evaluating
2. (i) Derive the equation of potential due to point, line, and surface and volume charge and obtain the relation between E and V . (8) (ii) Given the potential V= $(10 \sin \theta \cos \phi)/r^2$. Estimate the electric flux density at $(2, \pi/2, 0)$. (7)	BTL 5	Evaluating
3. At point P elaborate the magnitudes of V, E, Et, EN, D, DN and ρ_S of a potential field V= 100 e $^{-5x}$ sin 3y cos4z volts. Let point P (0.1, $\pi/12$, $\pi/24$) be located at a conductor free space boundary. (15)	BTL 6	Creating
$ \begin{array}{c} \text{(i) Derive the capacitance of general spherical capacitor, isolated sphere} \\ \text{coated with dielectric.} \\ \text{(ii) For a conducting sphere of 2 cm in diameter, covered with a layer of} \\ \text{polyethylene with } \mathcal{E}_r = 2.26 \text{ and 3 cm thick, Estimate the capacitance.} \\ \end{array} $	BTL 6	Creating
UNIT III MAGNETOSTATICS		
Lorentz force equation, Law of no magnetic monopoles, Ampere's law, Vector m	ility, Magne	etic circuits,
Savart law and applications, Magnetic field intensity and idea of relative permeab Behaviour of magnetic materials, Boundary conditions, Inductance and induct Magnetic forces and torques	tors, Magne	etic energy,

Q.No	Questions	BT	Competence
1.	Define magnetic field and magnetic lines of force.	BTL 1	Remembering
2.	State Biot-Savart's law.	BTL 1	Remembering
3.	How would you describe Ampere's circuital law?	BTL 1	Remembering
4.	What is scalar magnetic potential?	BTL 1	Remembering
5.	Write about magnetic flux and flux density.	BTL 1	Remembering
б.	List the applications of Ampere's circuital law.	BTL 1	Remembering
7.	Point out the relation between magnetic flux density and magnetic field intensity.	BTL 2	Understanding
8.	State the concept of permeability and its unit.	BTL 2	Understanding
9.	Write the Lorentz force equation for a moving charge?	BTL 2	Understanding
10.	the expression for magnetic moment.	BTL 2	Understanding
11.	Identify the relationship between magnetic field intensity and magnetization.	BTL 3	Applying
12.	Classify the different types of magnetic materials.	BTL 3	Applying
13.	Identify the expression of force between two current elements.	BTL 3	Applying
14.	Express the self and mutual inductance.	BTL 4	Analyzing
15.	Examine the expression of energy stored in an inductor.	BTL 4	Analyzing
16.	Analyze the mutual inductance of two inductively tightly coupled coils with self-inductance of 25mH and 100mH.	BTL 4	Analyzing
17.	Find the energy stored in inductor having current of 3A flowing through the inductor of 100mH.	BTL 5	Evaluating
18.	Compute torque where magnetic field is B =0.2 $\hat{\mathbf{a}}_{\mathbf{x}}$ + 0.4 $\hat{\mathbf{a}}_{\mathbf{z}}$ Wb/m ² and magnetic dipole moment is M =8*10 ⁻³ $\hat{\mathbf{a}}_{\mathbf{z}}$ Am ² .	BTL 5	Evaluating
19.	Generalize the phenomenon of hysteresis with reference to ferromagnetic materials.	BTL 6	Creating
20.	Express the energy stored in a magnetic field in terms of field quantities.	BTL 6	Creating
	PART – B		
1.	From the Biot-Savart's law, write the expression for magnetic field intensity at a point P and distance R from the infinitely long straight current carrying conductor. (13)	BTL 1	Remembering
2.	Derive the equations for magnetic field intensity and magnetic flux density at the center of the square current loop using Biot-Savart's law. (13)	BTL 1	Remembering
3.	Write short notes on(7)i) Magnetic field due to current carrying conductors.(7)ii) Law of non-magnetic monopoles.(6)	BTL 1	Remembering
4.	State about magnetization. Describe the classification of magnetic materialswith examples.(13)	BTL 1	Remembering

5.	Determine the magnetic field intensity at the origin due to current element $Idl = 3\pi(\mathbf{\hat{a}}_x + 2 \mathbf{\hat{a}}_y + 3\mathbf{\hat{a}}_z) \mu A \cdot m \text{ at } (3,4,5)m \text{ in free space.}$ (13)	BTL 5	Evaluating
6.	(i) Discuss about the force on a straight and long current carrying conductor placed in the uniform magnetic field. (7)	BTL 2	Understanding
	(ii) Explain with neat diagram about magnetic torque. (6)		
7.	 (i) Using Biot-Savart's law, derive the magnetic field intensity on the axis of a circular loop of radius R carrying a steady current I. (7) (ii) A circular loop located on x² + y² = 9, z = 0 carries a direct current of 10 A along a_φ. Calculate H at (0, 0, 4) and (0, 0, -4). (6) 	BTL 2	Understanding
8.	Determine the expression for Ampere circuital law. Apply the law for any two applications with necessary illustrations. (13)	BTL 3	Applying
9.	 i) Write the expression for Maxwell's curl equation for magnetic field from Ampere circuital law. (7) ii)Solve the magnetic field at a point P (0.01, 0, 0) m if current through a co-axial cable is 6 A. which is along the z-axis and a=3mm, b=9mm, c=11mm. (6) 	BTL 3	Applying
10.	Let $\mathbf{A}=(3y-z) \mathbf{a}\mathbf{x}+2xz\mathbf{a}\mathbf{y}$ Wb/m in a region of free space. i)Prove that $\nabla \cdot \mathbf{A} = 0$ (5) ii)At P (2, -1,3) find \mathbf{A} , \mathbf{B} , \mathbf{H} and \mathbf{J} (8)	BTL 4	Analyzing
11.	i) Estimate the expression for inductance of a toroidal coil carrying current I, with N turns and the radius of toroid 'r'.(7)ii) Formulate the expression for inductance of a coaxial cable.(6)	BTL 6	Creating
12.	Examine the magnetic field intensity within a magnetic material where i)(7) $M=150A/m$ and $\mu=1.5x10^{-5}$ H/m(7) $ii)$ B=300 μ T and $\chi_m=15$.(6)	BTL 4	Analyzing
13.	Describe about the magnetic boundary condition at the interface between two magnetic medium and derive the necessary boundary conditions. (13)	BTL 2	Understanding
14.	A solenoid with $N_1=2000$, $r_1=2$ cm and $l_1=100$ cm is concentric within a second coil of $N_2=4000$, $r_2=4$ cm and $l_2=100$ cm.Calculate mutual inductance assuming free space conditions. (13)	BTL 4	Analyzing
	PART – C		
1.	i) Distinguish between magnetic scalar potential from the vector potential with necessary equations.(8)ii) Calculate the magnetic flux density for a current distribution in free space, $\mathbf{A} = (2x^2y+yz) \hat{\mathbf{a}}_x + (xy^2-xz^3) \hat{\mathbf{a}}_{y}$ -(6xyz-2x²y²) $\hat{\mathbf{a}}_{z}$ Wb/m.(7)	BTL 5	Evaluating
2.	(i) At a point P (x, y, z) the components of vector magnetic potential \vec{A} are given as $A_x = (4x + 3y+2z)$, $A_y = (5x + 6y + 3z)$ and $A_z = (2x+3y+5z)$. Determine \vec{B} at point P. (8) (ii) A solenoid has an inductance of 20mH. If the length of the solenoid is increased by two times and the radius is decreased to half of its original value, Compute the new inductance. (7)	BTL 5	Evaluating

3.	Region 1 is the semi-infinite space in which $2x-5y>0$, while region 2 is defined by $2x-5y<0$. Let $\mu_{r1}=3$, $\mu_{r2}=4$ and $\overline{H}_1=30\overline{a}_x$ A/m. Calculate	BTL 6	Creating
	(a) $ \bar{\mathbf{B}}_{1} $, (b) $ \bar{\mathbf{B}}_{N1} $, (c) $ \bar{\mathbf{H}}_{tan1} $, (d) $ \bar{\mathbf{H}}_{2} $. (15)		
4.	 (i) A solenoid is 50 cm long, 2 cm in diameter and contains 1500 turns. The cylindrical core has a diameter of 2 cm and a relative permeability of 75. This coil is co-axial with second solenoid which is 50 cm long, 3 cm diameter and 1200 turns. Solve the inductance L for inner and outer solenoid. (7) 	BTL 6	Creating
	 (ii) Propose the solution for energy stored in the solenoid having 2m long and 10 cm in diameter and is wound with 4000 turns of wire, carrying a current of 8 A. 		
	UNIT IV TIME-VARYING FIELDS AND MAXWELL'S EQUAT	ΓIONS	
differe harmo	y's law, Displacement current, Gauss's law for magnetic field, Maxwell's four ntial form, Potential functions, Electromagnetic boundary conditions, Wave equat nic fields, Electromagnetic power flow and Poynting vector.	tions and	solutions, Time-
1	State Lenz's law.	BTL 1	Remembering
2	List out the characteristics medium in which EMF exist.	BTL 1	Remembering
3	Write the Maxwell's expression for free space.	BTL 1	Remembering
4	Point out the Maxwell's equation derived from faraday's law.	BTL 1	Remembering
5	Define Deventing the energy		8
6	Define Poynting theorem.	BTL 1	Remembering
0	Define Poynting theorem. Express phase velocity with necessary equation.	BTL 1 BTL 2	
7			Remembering
	Express phase velocity with necessary equation.Obtain the expression for induced emf when a moving closed path is placed	BTL 2	Remembering Understanding
7	Express phase velocity with necessary equation. Obtain the expression for induced emf when a moving closed path is placed in a time varying magnetic field.	BTL 2 BTL 1	Remembering Understanding Remembering

19	Obtain the retarded electric scalar potential and retarded magnetic vector potential.	BTL 6	Creating
20	Express Poynting theorem in point form and integral form.	BTL 6	Creating
	PART B		
1	i) Electric flux density in a charge free region is given by $D=10xa_x+5ya_y+kza_z\mu C/m^2$. Find the constant k.(7)ii) If the magnetic field H= $(3x\cos\beta+6y\sin\alpha) a_z$, Determine the current density J if fields are invariant with time.(6)	BTL 1	Remembering
2	A circular loop of N turns of conducting wire lies in the XY plane with its center at the origin of magnetic field specified by $B = B_0 \cos (\pi r/2b) * \sin \omega t$ a_z where, b is the radius of the loop and ω is the angular frequency. Find the emf induced in the loop. (13)	BTL 1	Remembering
3	(i) Obtain the Maxwell's equation for harmonically varying fields. (7) (ii) In a given lossy dielectric medium, conduction current density $J_c=0.02$ $\sin 10^9 t$ (A/m ²). Find the displacement current density if $\sigma=10^3$ S/m and $\epsilon_r=6.5$ (6)	BTL 1	Remembering
4	Derive the Maxwell's equation for a time varying are modified for time varying from fundamental laws of electric and magnetic fields. (13)	BTL 1	Remembering
5	Explain in detail on retarded scalar and vector potential and derive the generalized wave equation in free space. (13)	BTL 2	Understanding
6	Illustrate the integral and point form of Maxwell's equations for static fields. (13)	BTL 3	Applying
7	 i) Find the transformer EMF induced in a stationary closed path in a time varying B field? (7) ii)Obtain the motional EMF induced in moving closed path in static B field.(6) 	BTL 2	Understanding
8	Calculate the maximum emf induced in a coil of 4000 turns of radius of 12 cm rotating at 30 rps in a magnetic field of 0.05 Wb/m^2 . (13)	BTL 2	Understanding
9	i) Deduce the detailed steps for the derivation of electromagnetic boundary conditions for a time varying fields. (7)	BTL 3	Applying
	ii) Determine EMF induced about the path $r = 0.5, z = 0, t = 0$. If B = 0.01sin377t (6)		
10	i)Illustrate with necessary fundamentals the equation of continuity of current in differential form. (7)	BTL 3	Applying
	ii) Prove that modified ampere's law is consistent with the time varying field. (6)		
11	Analyze the physical interpretation of Maxwell's first and second equations. (13)	BTL 4	Analyzing
12	In a region where $\mathcal{E}_r = \mu_r = 1$ and $\sigma = 0$ let $\mathbf{A} = 10^{-3}$ y cos 3×10^8 t cosz a _z Wb/m and V= 3×10^5 y sin 3×10^8 t sinz V. Find E and H . (13)	BTL 4	Analyzing

13.	Derive an expression for displacement current density and state the physical significance of it. (13)	BTL 5	Evaluating
14	Do the fields $E=E_m \sin x \sin t a_y$ and $H=(H_m/\mu_0) \cos x \cos t a_z \text{ satisfy}$ Maxwell's equations? (13)	BTL 6	Creating
	PART C		
1	In free space, $E=50 \cos (\omega t - \beta z) \hat{a}_x V/m$. Find the average power crossing a circular area of radius 2.5 m in the plane Z=0. Assume $E_m = H_m$. Π_0 and $\Pi_0 = 120\pi\Omega$. (15)	BTL 6	Creating
2	The unit vector 0.48 $\hat{a}_x - 0.6 \hat{a}_y + 0.64 \hat{a}_z$ is directed from region 2 ($\mathcal{E}_{r2} = 2.5$, $\mu_{r2} = 2$, $\sigma_2 = 0$) towards region 1 ($\mathcal{E}_{r1} = 4$, $\mu_{r1} = 10$, $\sigma_1 = 0$).If H1= (-100 $\hat{a}_x - 50 \hat{a}_y + 200 \hat{a}_z$) sin 400t A/m at the point p in region 1 adjacent to the boundary. Determine the amplitude at point P of : a) HN ₁ (4) b) H _{tan1} (4) c) H _{N2} (4) d) H ₂ (3)	BTL 5	Evaluating
3	Calculate β and H in a medium characterized by $\sigma=0$, $\mu=\mu_0$, $\mathcal{E}=4 \mathcal{E}_0$ and $\mathbf{E}=20 \sin (10^8 t \beta z) a_y V/m.$ (15)	BTL 5	Evaluating
4	Solve the value of k such that following pairs of field satisfies Maxwell's equation in the region where $\sigma=0$, $\sigma_v=0$ (i) $\mathbf{\overline{E}} = [kx-100t] \mathbf{\overline{a}}_y \text{ V/m}$, $\mathbf{\overline{H}} = [x+20t] \mathbf{\overline{a}}_z \text{ A/m}$ and $\mu=0.25\text{ H/m}$, $\epsilon=0.01\text{ F/m}$ (8) (ii) $\mathbf{\overline{D}} = 5x\mathbf{\overline{a}}_x - 2\mathbf{\overline{a}}_y + kz\mathbf{\overline{a}}_z \mu\text{C/m}^2$, $\mathbf{\overline{B}} = 2\mathbf{\overline{a}}_y \text{ mT}$ and $\mu=\mu_0$, $\epsilon=\epsilon_0$. 1	What is meant by wavelength?	BTL 1	Remembering
2	Define Group velocity.	BTL 1	Remembering
3	Describe the characteristics of uniform plane wave?	BTL 1	Remembering
4	State depth of penetration.	BTL 1	Remembering
5	Give the expressions for propagation constant, intrinsic impedance if a wave propagates in a lossy dielectric.	BTL 1	Remembering
6	Mention the significance of loss tangent.	BTL 1	Remembering
7	Write the intrinsic impedance of free space.	BTL 2	Understanding
8	Point out the difference between attenuation constant and phase constant.	BTL 2	Understanding
9	State the general wave equation in terms of electric and magnetic fields.	BTL 2	Understanding
10	Illustrate the cross product of E and H in uniform Plane waves	BTL 2	Understanding
11	Calculate the velocity of a plane wave in a lossless medium having a relative permittivity of 4 and a relative permeability of 1.2.	BTL 3	Applying

12	Find the characteristics impedance of the medium whose relative permittivity and relative permeability is 1.	BTL 3	Applying
13	Derive the expression for transmission and reflection coefficient for normal incidence at plane conducting boundary.	BTL 3	Applying
14	Express the values of skin depth for a plane wave propagating through the dielectric with attenuation constant of 0.2887 Np/m.	BTL 4	Analyzing
15	Examine the significance of intrinsic impedance.	BTL 4	Analyzing
16	Analyze the wave equation in phasor form.	BTL 4	Analyzing
17	Formulate the expression for the intrinsic impedance, attenuation constant and phase constant for good conducting medium.	BTL 5	Evaluating
18	Can a magnetic field exist in a good conductor if it is static or time varying? Explain.	BTL 5	Evaluating
19	Compute propagation constant in free space for a wave with 100MHz.	BTL 6	Creating
20	Develop the expressions for Standing wave ratio when the amplitudes of reflected and incident waves are equal.	BTL 6	Creating
	PART – B		
1	Starting from the Maxwell's equation derive homogenous vector Helmholtz'sequation in phasor form.(13)	BTL 1	Remembering
2	Derive the wave equation for the electric and magnetic fields for free space conditions. (13)	BTL 1	Remembering
3	Write short notes on uniform plane waves and derive the wave equation. (13)	BTL 1	Remembering
4	Describe the intrinsic impedance of uniform, plane waves in lossy dielectric and lossy conductor. (13)	BTL 1	Remembering
5	A uniform plane wave $E_y = 10 \sin (2\pi * 10^8 t - \beta x) \hat{a}_y$ is travelling in x directon in free space. Determine i) Phase constant ii) Phase velocity iii) Expression for H _z . Assume $E_z = 0 = H_{y}$. (13)	BTL 5	Evaluating
6	Explain the condition under which the magnitude of the reflection coefficient equals that of the transmission coefficient for a uniform wave at normal incidence on an interface between two lossless dielectric medium. (13)	BTL 2	Understanding
7	Demonstrate the equations for a plane wave incident normally on a plane dielectric boundary. (13)	BTL 2	Understanding
8	E and H waves travelling in free space are normally incident on the interface with a perfect dielectric with $\mathcal{E}_r = 3$. Compute the magnitudes of incident, reflected and transmitted E and H waves at the interface. (13)	BTL 3	Applying
9	A 300 MHz uniform Plane propagates through fresh water for which $\mathcal{E}_r = 78$, $\mu_r = 1$ and $\sigma = 0$. Calculate attenuation constant, Phase Constant, Wavelength, Intrinsic impedance. (13)	BTL 3	Applying
10	Determine the intrinsic impedance, wavelength, attenuation, phase, and propagation constant for electromagnetic waves in any medium. (13)	BTL 4	Analyzing
11	Derive the electromagnetic wave equation in phasor form with necessary equations. (13)	BTL 4	Analyzing
12	Illustrate the reflection coefficient of normal incidence at a plane dielectric boundary. (13)	BTL 2	Understanding

13Examine the expressions for the transmission and reflection coefficients at the interface of two media for normal incidence.BTL 4Analyzing14Estimate the frequency of a wave and the conductivity of the medium for a uniform plane wave travelling at a velocity of $2.5*10^5$ m/s having a wavelength of 0.25 mm in a non-magnetic good conductor.BTL 6Creating1A 6580 MHz uniform plane is propagating in a material medium of $\& r_{=2.25}$.
